

FOUNTAIN SET-UP

- + **Fountain should be placed on flat level surface. Besides the weight of the fountain, water weighs 8.34 lbs/gallon. This must be considered when placing fountain.**
- + **Pump should only be connected into a grounded 110 volt receptacle.**

CARE AND MAINTANCE

- + **Maintaining a proper water level is important to ensure fountain pump is completely submerged. This keeps the pump from being damaged.**
- + **Clean only with a soft bristle brush and soap and water. Do not use bleach or harsh chemicals as this may damage the finish, and any rubber or plastic pieces.**
- + **Keeping the pump free of debris will help with consistent water flow, and also extend the life of your fountain pump.**

WINTER CARE

- + **Proper winter care is essential to ensure longevity of your fountain. It is important that no water is allowed to pool in the basin of your fountain, when there is a chance of freezing. It is the expansion of water that can cause fountains to crack or chip. All rubber stoppers need to be removed so water can drain from the fountain. Fountains need to be covered with a waterproof tarp to prevent water from pooling in the basin.**
