Tomatoes in the Garden

TOMATOES

Tomatoes are America's favorite vegetable. Finding your favorite varieties can take many happy seasons of gardening . But first, start with tried and true varieties, then find out what the old timers and neighbors like to grow. Read up on new introductions and old heirloom varieties. The sheer variety in fruit color, texture and flavor will keep you searching for years.

Tomatoes are classified several ways. First is by use. Slicing for fresh eating or sandwiches, canning or tomato paste varieties (these are not so juicy). Then there are salad or snack tomatoes. These are small fruited, ideal for popping in your mouth or for use in a salad. Usually very sweet. There is one more class called heirloom tomatoes. These are old fashioned varieties, usually slicers, that are unique to a certain geographic area or time. Many have unique color, shape, flavor and texture.

The next way to classify tomatoes is by season length. Some tomato varieties ripen early and some during main season. If you are planting determinate varieties (explained later) stagger planting times 3 weeks apart to extend the harvest season.

Finally, tomatoes can be determinate or indeterminate. Determinate plants set fruit only once during the plants life and then are done for the season. They are usually shorter in stature, also. Indeterminate plants types continue to grow and produce fruit till frost, hence plants can get large and tall if staked or sprawl if left on the ground.

Start your tomatoes by direct seeding or by transplants bought at Oakland or grown at home from seed. Your garden soil should be rich and loamy. Take the time to prepare your soil, and you will be rewarded with a bountiful harvest. If you are planning to stake the plants, drive your stakes in before planting the tomatoes. This avoids root damage to the small plant. Try to water at the base of the plant to avoid water sitting on the leaves to long. Excess water promotes disease. If overhead watering is necessary, do it in the morning on sunny days.

Below are tomato varieties that Oakland has carried in the past and plan to carry this year. Remember, this list does not include the varieties of tomato seeds we carry. Also, our stock of tomato plants fluctuates wildly through 'Veggie Madness Time' (May), so it is all subject to availability.
